

Tenpower participated in the 37th CIHF as a supplier of cylindrical lithium battery cells

In the 2024 China International Hardware Fair (2024 CIHF), Tenpower, an industry-leading power solution provider, showcased multiple innovative products that garnered the attention and acclaim of numerous attendees. This exhibition was a stage for showcasing products and an important platform for promoting communication and cooperation.

As a supplier in the small-power lithium battery sector, Tenpower has focused on cylindrical cells for 18 years, with a cumulative shipment of over 3 billion units.

Tenpower continually launches competitive and creative products to create greater value for users and partners. At this exhibition, Tenpower presented several new products either in mass production or planning stage.

Participating in this fair held significant meaning. Firstly, it is an important opportunity for Tenpower to establish connections with industry partners and clients. During the exhibition, Tenpower not only showcased its products but also engaged in in-depth technical exchanges with many participating companies, exploring potential future collaborations.

Secondly, the China International Hardware Fair serves as a platform to showcase industry development trends. By understanding cutting-edge technologies and market dynamics, Tenpower can better grasp market trends, adjust its development strategies, and maintain a competitive edge. This exhibition also provided Tenpower with a window to understand customer needs and enhance product design and service quality, thereby better meeting the diverse demands of the market.

The 18650–2500mAh cells brought comprehensive performance improvements: 10C continuous discharge without triggering temperature protection, support for 4C charging, and over 80% SOC after 800 cycles (+4A/-25A). We believe this can help more technology innovators achieve substantial upgrades to their products.
